Grep Lab

The first thing you want to do in this lab is put the GrepLab file you downloaded into into your file share program(winscp for me) then run ubuntu server

Drag the file from the left to the right side.

1. Print all lines containing the string Lane

For this question you want to know what a string is, it's characters that are together so you would want to just type in the string after grep which is "Lane"

grep Lane GrepLab

```
Arya Stark:438-910-7449:8235 Maple Street, Wilmington, VM 29085:9/23/63:68900
miles@milesadminserver:~$ grep Lane GrepLab
Huckleberry Finn:238-923-7366:95 Latham Lane, Easton, PA 83755:11/12/56:20300

miles@milesadminserver:~$
```

2. Print all lines where the person's first name starts with H

If you use ^ before a letter It will print the lines that start with that letter.

command: `grep ^H GrepLab`

```
miles@milesadminserver:~$ grep ^H GrepLab
Huckleberry Finn:238-923-7366:95 Latham Lane, Easton, PA 83755:11/12/56:20300
Holly Golightly:397-857-2735:74 Pine Street, Dearborn, MI 23874:3/28/45:245700

```

3. Print all lines ending in three zeros (000)

you want to use the \$ after the numbers because it will go to the end of the line and print the lines ending in 000.

command: `grep 000$ GrepLab`

```
miles@milesadminserver:~$ grep 000$ GrepLab

miles@milesadminserver:~$ _
```

4. Print all lines that don't contain 408.

when you want to have it so it prints lines that dont contain something use `grep -v`, the `-v` makes it so it will exclude lines with whatever's after it
